Pallet Truck Anti-Roll Stabiliser

The Safe Way To
Do The Job

Our Pallet Truck Anti-Roll Stabiliser is designed to eliminate freight and vehicle damage due to moving pallet trucks. Its easy to use, easy to store and it protects valuable freight and

equipment from damage caused when a pallet truck moves during transit

The PTARS is ideal for haulage companies, pallet distributors and other material handling equipment companies with a requirement to secure their pallet trucks

The PTARS is lightweight only 4kg and easy to use allowing any user to easily secure their pallet truck during transit by simply wheeling the truck into position. This innovative and inexpensive product is an ideal solution for the transport industry

Unlike traditional Chocks and Stops our original T-shaped design supports not only the wheels but also the chassis allowing for increased friction between the PTARS and the floor of the lorry.

Eliminate Danger—Maximise Health + Safety

1. No need to turn the Pallet Truck on its side — (very dangerous for driver)
2. No need to lift the heavy Pallet Truck into a tyre— (strains the driver back)
3. Avoids damage to the goods being transported interior of the transporting vehicle and Pallet Truck itself
4. Avoids a health and safety risk to your driver. Should be included as part of your risk assessment
